

Windshield Repair System

Art.: 10.1447.9999

Set

The Windshield Repair System is a set of tools and chemical products specially developed to repair stone chip damage and star cracks in laminated windscreens in a very professional manner.

Stone chip damage and star cracks in laminated windscreens are caused by external influences. The damage is usually caused by small stones. Thrown up by the wheels of the car in front, they often hit the windscreen at high speed. The result is that this ugly damage often impedes the view of the driver.

In most cases the Windshield Repair System ensures that star cracks do not extend, and considerably improves the view through the windscreen. The big advantage with this system is that it prevents an expensive change of windscreen. With a very small investment in time and materials the damaged windscreen can be returned to perfect condition.

The Windshield Repair System comes complete in a durable aluminium case. The system is very organized and can be used in all of your departmental workshops.

- Professional set for repairing star cracks in laminated windscreens.
- Prevents cracks from extending.
- Prevents expensive windscreen replacement.
- Small investment in materials and time.
- System packed in a durable aluminium case.
